Ecosystem approaches  
to the management of  
ocean-related activities

# Training manual

United Nations

## Manual outline

I.	Introduction to an ecosystem approach .....	1
1.	Introduction.....	2
2.	Basic concepts .....	4
2.1	Ecosystem approach.....	4
2.2	Ecosystems.....	6
2.3	Ecosystem health.....	7
3.	Benefits of adopting an ecosystem approach.....	9
3.1	Traditional approaches and ecosystem approaches.....	9
3.2	Direct and indirect benefits of an ecosystem approach.....	12
4.	Ecosystem approaches.....	16
4.1	Ecosystem approaches that focus on marine ecosystems.....	17
4.2	Ecosystem approaches that focus on fisheries.....	19
5.	Ecosystem approaches in international law and policy instruments and programmes.....	22
5.1	Global instruments on ecosystem approaches.....	22
5.2	Other relevant instruments and programmes.....	38
6.	Principles and guidance for developing and implementing an ecosystem approach.	44
Annex 1	International governance framework for an ecosystem approach.....	52
II.	The science of ecosystem approaches .....	67
1.	Introduction.....	68
2.	Science definitions of ecosystems.....	68
2.1	Diversity of definitions.....	68
2.2	The relevance of differences in definitions to management and policy.....	73
3.	Biological ecosystem composition.....	80
3.1	Primary producers.....	80
3.2	Grazers or “secondary consumers”.....	81
3.3	Marine fish and invertebrates.....	82
3.4	Seabirds, marine mammals, and sea turtles.....	87
3.5	Biological diversity.....	89
4.	Ecosystem processes and interactions.....	93
4.1	Nutrient and energetic approaches.....	94
4.2	Individual and population-based approaches.....	100

5.	Critical functions .....	106
6.	Ecosystem health.....	111
7.	Ecosystem integrity.....	113
III.	Governance and socio-economic aspects of ecosystems approaches.....	125
1.	Introduction.....	127
1.1	Changing patterns of management of ocean-related activities: towards an ecosystem approach.....	127
2.	The concept of governance.....	130
2.1	The role of government.....	133
2.2	The role of the marketplace.....	134
2.3	The role of civil society.....	134
2.4	Need for site-specific understanding of governance arrangements.....	135
3.	Equity and sustainable development.....	137
4.	Applying an ecosystem approach in a socio-economic context.....	139
5.	Role of government.....	141
5.1	Political dynamics of regulatory policy.....	141
6.	Economic aspects.....	144
6.1	How markets impact ecosystems.....	144
6.2	Impacts of economic activities on ecosystems .....	146
6.2.1	Socio-economic importance of fishing activities and their impacts on ecosystems.....	147
6.2.2	Marine and coastal pollution and habitat degradation from human activities.....	149
7.	Social aspects.....	154
7.1	Social norms and networks.....	155
7.2	Moral obligation.....	156
7.3	Social influence.....	157
7.4	Changing use patterns and traditional communities.....	159
7.5	Non-governmental organizations.....	162
7.6	Stakeholder participation.....	163
7.6.1	Identifying stakeholders.....	163
7.6.2	The extent of stakeholder participation.....	165
7.7	Conflict management.....	166

8.	Sustainable financing.....	169
8.1	The financing challenge.....	169
8.2	Mitigating the impacts of markets and addressing government performance.....	171
8.3	Valuation of ecosystem goods and services.....	172
9.	Meeting the challenges.....	176
9.1	Economic challenges.....	176
9.2	Government challenges.....	178
9.3	Challenges associated with civil society.....	179
IV.	Developing and implementing an ecosystem approach.....	187
1.	Introduction.....	189
2.	Developing and implementing an ecosystem approach.....	189
2.1	Summary of steps in the development and implementation of an ecosystem approach.....	190
2.1.1	Identification of the geographical scope for the application of an ecosystem approach.....	191
2.1.2	Scientific research and analysis of the components of the ecosystem, their interaction and functioning.....	192
2.1.3	Assessment of the condition of the ecosystem.....	192
2.1.4	Establishment of ecological and operational objectives to maintain biodiversity, productivity, water quality and habitat quality in a given ecological region.....	192
2.1.5	Selection of ecological indicators to ensure that ecological objectives are being met.....	193
2.1.6	Identification of pressures and impacts on the ecosystems.....	193
2.1.7	Analysis of existing legal framework and identification of gaps, overlaps and inconsistencies.....	193
2.1.8	Management of human activities that affect or might affect the ecosystem.....	194
2.1.9	Stakeholder participation, public involvement, education and outreach.....	195
2.1.10	Monitoring of natural changes in ecosystems and the effects of management measures through ecological indicators.....	195
2.1.11	Adjustment of the management system, if necessary.....	196
2.1.12	Integrated management structures.....	196
2.1.13	Compliance, enforcement and dispute resolution.....	196
2.2	Closing governance gaps.....	198
2.2.1	Understanding how the existing governance system operates.....	198

2.2.2	Functions in the implementation of an ecosystem approach.....	199
2.2.3	Overcoming gaps.....	199
2.3	Governance of areas beyond national jurisdiction.....	201
3.	Ecosystem objectives.....	203
4.	Monitoring.....	212
4.1	Variables.....	212
4.2	Ecological and other indicators.....	215
4.3	Benchmarks and targets.....	218
4.4	Modeling.....	220
4.5	Data collection.....	222
5.	Addressing incomplete knowledge and capacity limitations.....	226
5.1	Science, policy and knowledge gaps.....	227
5.2	The application of precaution.....	228
6.	Adaptive Management.....	232
7.	Area-based management as a tool for the development and implementation of an ecosystem approach.....	233
7.1	Types of area-based management tools and their regulatory framework.....	235
7.1.1	Protected areas.....	237
7.1.2	Area-based management of fisheries.....	240
7.1.3	Area-based management tools for other marine species.....	242
7.1.4	Area-based management relating to shipping activities.....	243
7.1.5	Other area-based management tools and approaches.....	244
7.2	Development and implementation of area-based management tools.....	248
7.2.1	Identification of areas.....	248
7.2.2	Management plans.....	249
7.2.3	Compliance and enforcement mechanisms.....	249
7.2.4	Research, monitoring and assessment.....	250
8.	Financing mechanisms.....	252
8.1	Selecting among financing options.....	254
9.	Challenges.....	257
10.	Conclusion.....	262
Annexes	Ninth Meeting of the Conference of the Parties to the Convention on Biological Diversity, Decision IX/20.....	264

## List of boxes and illustrations

### Module I

Box 1	Elements of an ecosystem approach.....	6
Box 2	Case study: Coral reef phase shifts in Jamaica.....	8
Box 3	Traditional approaches vs. Ecosystem approaches.....	12
Box 4	The ecosystem approach to the management of small islands: Some experiences from New Zealand.....	14
Box 5	What is ecosystem-based management? .....	17
Box 6	EBFM case study: The FISH project.....	20
Box 7	Case study: The modular approach to large marine ecosystems management.....	28
Box 8	The ecosystem approach in OSPAR.....	41
Box 9	The marine reserve of Galapagos in Ecuador.....	46
Box 10	Principles and guidance for implementing an ecosystem approach.....	48

### Module II

Box 11	Examples of definitions of an ecosystem.....	69
Box 12	Philippines coastal resources and threats from coastal run-off.....	72
Figure 1	Interaction of various ecosystem components.....	74
Box 13	A coastal upwelling system – the Benguela current.....	75
Box 14	Coral reef ecosystems.....	76
Figure 2	Primary producers of the ocean.....	80
Figure 3	A simple marine food chain.....	81
Figure 4	Biological ecosystem components: how it all comes together (food web).....	88
Box 15	The census of marine life.....	90
Box 16	Hydrothermal vent ecosystems.....	95
Figure 5	Complex interrelationships: Model of trophic relationships between species within a marine food web.....	98
Figure 6	Simple “food pyramid” illustrating feeding relations between trophic levels and respective population characteristics at each level.....	101

### Module III

Box 17	Governance challenges in the Benguela current large marine ecosystem.....	129
Figure 7	Key governance mechanisms.....	132
Box 18	Governance mechanisms and examples of the tools available to them.....	136
Box 19	The tragedy of the commons.....	146

Box 20	Marine and coastal pollution from land-based activities.....	150
Box 21	State changes in aquatic ecosystems and environmental and human impacts....	152
Box 22	Social sciences in the management of ocean-related activities.....	155
Box 23	Coalition of legal toothfish operators.....	158
Box 24	Ecolabeling and the marine stewardship council.....	159
Box 25	Hawaiian ahupua'a and an ecosystem approach.....	160
Box 26	Principles and guidelines for indigenous/traditional peoples and protected areas.....	161
Figure 8	Living beyond our means: Natural assets and human well-being, millennium ecosystem, assessment.....	173
Box 27	<i>Philippines: Protecting coastal resources supports economy, promotes citizens' well-being</i> .....	174
Box 28	The role of subsidies in the fisheries sector.....	177
<b>Module IV</b>		
Box 29	Integrated management of the marine environment of the Norwegian sea.....	190
Box 30	Mexico's ocean policy.....	194
Box 31	Governance gap analysis: an operational approach.....	198
Box 32	Ecosystem objectives.....	204
Box 33	Goals & objectives of the Eastern Scotian Shelf Integrated Management (ESSIM) initiative.....	206
Box 34	Community-based indicator monitoring.....	213
Figure 9	Carbon flow model.....	221
Box 35	The Chilean community-based management system.....	223
Box 36	Case study: An ecosystem approach to the management of the great barrier reef marine park.....	234
Box 37	Case Study: The Soufriere Marine Management Area (SMMA).....	236
Box 38	Marine protected areas in Palau.....	239
Box 39	Case Study: The Benguela Current Large Marine Ecosystem (BCLME) programme.....	245
Box 40	What is marine spatial planning? .....	247
Box 41	Case studies of sustainable financing for marine ecosystem governance.....	255
