1.1 Automotive value chains: The case of Romania's Dacia	20
--	----

Figures

1.1 Growth in Europe and Central Asia is stabilizing	7
1.2 Inflation in the region is normalizing	7
1.3 Unemployment rates in the European Union have fallen	9
1.4 Labor force participation in most of the region has risen	10
1.5 Contrary to expectations, labor participation rates in two aging societies— Bulgaria and Germany—have increased	10
1.6 Romania's boom was characterized by current account deficits, which financed the growth of nontradables	12
1.7 Spain's investment rate has fallen to reduce overinvestment	13
2.1 Global trade intensified rapidly between 1990 and 2008	16
2.2 Developing countries have grown more rapidly than high-income countries since 2002, narrowing the income gap between them	16
2.3 Tariff reductions continued into the 2000s	18
2.4 Exports from Europe and Central Asia reflect subregions' comparative advantages	19
2.5 Central Europe integrated into automotive value chains	20
B2.1.1 The automotive sector was the third-largest recipient of foreign direct investment in Romania between 2003 and 2011	21
B2.1.2 Romania has moved from exporting parts to exporting vehicles	21
2.6 Transition economies have gradually shifted toward high-skilled-intensive exports.	22
2.7 High-skilled manufacturing in Europe and Central Asia has matured.	23
2.8 Growth in international trade coincided with faster income growth.	24
2.9 Global trade has slowed relative to GDP	25
2.10 Export growth in Europe and Central Asia remains brisk	27
2.11 The rise of China as an industrial producer hurt Europe and Central Asia less than other regions	28
2.12 In Romania—as elsewhere—workers with secondary education and workers performing routine jobs are more exposed to trade than other workers	29
2.13 Europe and Central Asia could trade more with other regions.	31
2.14 The share of services in EU exports is rising	31
